

Testing

try to include accessory with the main phases → tell the ai to explain them to u and how u can link them with the main stuff

- Meetings (in maybe you can link it with phase 2 and 3 where you can have one on one including employ and managnager
- Career path developemnt (maybe you can link it with phase 3 and hr and ai reccomandation or smth)
- Tasks (link it i with taks s form phase 2 and 3 idk how)
- Feedbacks
- idnt know what are those
 - Validations
 - HR Decisions
 - Audit Logs

General

- **Do input control on cycle managemnt and give it acces to anoither user beside the and this controle should not include the admin he can do hatever he wants**
- the search bar in annual cycles does not work
- the ui is bad
 - the proportions are not good
 - the sidebar doesnt fully fold
 - the buttons are out of place

- the windows are not good
- check the dashboard on home page and if everything is working (charts and all)
- For example, if I am in the mid-year, for example, execution as an employee, I should not see the end-year year review. And like if I am in the end-year year review, I should not see the mid-year execution. And they're just in the bar

Phase 1

- when the cycle did not start when i push objective show me as a user a msg that i cannot submit the goals the cycle did not start
- make it so when all the requiremnt for objective like for individual goals (weight ,count.....) only then i can submit the goals
- as the manager in goal review remove the request revision keep only reject and approve and keep the comment section when reject and remove the (adjusted proceess (optional)) part in this place from the ui of this
- in this section the when i click on the vertival 3 buttons on the goals for edit or delete they barely show up at att fixe thos ui problkem when i claick on the make them always clear and visible
- int he objectives part
- remove the opverall stats from ui
- i have a problem as a manager or team leader when i create a team objective and give him 20 wegiht it become $20 \times \text{nbr of team mbmber}$ and thats wrong it should be 20 (u should iterate and explain it better than what i did)
- when clicking on an objective remove mark completed

Phase 2

- In Phase 2, once an employee submits a check-in, the system should clearly show that the objective has already been checked in and display its current status.

- The check-in process should work as a review cycle between the employee and the manager. The employee submits the update, the manager reviews and gives feedback or correction requests, and only then can the employee edit and resubmit the check-in. This prevents uncontrolled submissions and creates a proper validation workflow

In the mid evaluation

- **Remove**
 - Remove **"Generate AI Draft"**
 - Remove **"Support Required?"**
 - Remove duplicate concepts
"Status Track" + "Progress %" already explain most progress

Add those for employee

- Progress bar and % tracking visualization
- Milestone & completed tasks tracking (i have taks alreeady in my code sync them together examples :
 - Completed tasks field
 - Remaining tasks field
- File/evidence attachments (pdf,documents , links,screenshosts
- Priority indicator (Low , medimum high ...)
- Deadline Awareness
 - Due date
 - Days remaining
 - Late warning badge

Example:

-  Overdue
-  Due in 3 days

- ● On schedule

Add those for Managers

1. Progress timeline / history tracking

Managers can view how a task evolved over time, including updates and past check-ins, giving full visibility on work evolution.

2. Team performance dashboard

A centralized dashboard shows overall team progress, workload distribution, and completion rates for quick decision-making.

3. Risk & overdue detection

The system highlights delayed tasks or high-risk objectives, helping managers intervene early before issues escalate.

4. Feedback & approval system

Managers can validate or reject check-ins, leave structured feedback, and guide employees with corrections or suggestions.

5. KPI & productivity analytics

Managers can analyze performance metrics (completion rate, efficiency, delays, workload balance) to evaluate both individuals and teams.

Phase 3

What to COPY from Phase 2 (keep as base, don't change)

These are still needed but reused only:

- Progress tracking (progress bar + %)
- Tasks + milestones structure
- Deadlines + status system
- Check-in + manager feedback workflow
- File / evidence attachments

- KPI / performance metrics (basic version)

👉 These are your **data foundation** (don't redesign them)

❌ What NOT to repeat in Phase 3

Avoid reusing Phase 2 concepts:

- ❌ Basic check-in cycles (employee → manager → edit → resubmit)
- ❌ Simple progress tracking UI
- ❌ Basic KPI dashboards (same as Phase 2)
- ❌ Manual feedback system as the main feature
- ❌ Basic overdue / status indicators (already done)

👉 Phase 3 should NOT be about "tracking work anymore"

🧠 Phase 3 — What to ADD (FINAL EVALUATION FEATURES)

👤 Employee Side (Final Evaluation Focus)

- Final performance summary (end-of-cycle report)
- Strengths & weaknesses report (based on manager + data)
- Final KPI score display (global score for the period)
- Achievement recap (what was completed vs planned)
- Improvement suggestions for next cycle
- Peer/manager final feedback view (clean summary, not raw comments)
- Personal growth history (compare this cycle vs previous one)

👔 Manager Side (Final Evaluation Focus)

- Final employee rating / scoring system (end-of-cycle evaluation)

- Automatic performance report generation per employee
 - Promotion / warning suggestion indicators
 - Comparison between employees (ranking or grouping)
 - Final evaluation report export (PDF or summary sheet)
 - Goal completionw analysis (what objectives were fully/partially failed)
 - Team performance summary for entire cycle
 - Decision support dashboard (who performed well / average / low)
-

Advanced (Big Phase 3 Upgrade — OPTIONAL BUT STRONG)

- AI-generated final evaluation report (auto-written summary)
- Performance prediction for next cycle (future performance estimate)
- Skill growth tracking (how employee improved over time)
- Automated "final score calculation engine" (based on KPIs + tasks + feedback)
- Reorient the ai of the end of the year to the manager / rh in order to better asses the humain population for better formation

Accessory testing

- in meetings i cant choose with whome i want a meet in meet creation
